

New Jersey's Clean Energy Program™

Supported Solar Installations

As of March 31, 2008, over 2,942 New Jersey residential, commercial, public, and non-profit entities have made solar energy a part of their everyday lives by installing a solar electric system. In addition to 2,380+ residential and small businesses across the state, over 560 commercial and public entities have chosen solar. This map reflects some of the residential, commercial, and public entities that have installed a solar electric system with support from the New Jersey Board of Public Utilities.

New Jersey Solar Installation Projects (CORE)

(2001 - March 31, 2008)

*Total NJCEP + Utilities. CORE program managed by utilities 2001 through mid-2003. 2008: includes Check Requests Pending Payment; preliminary results as of 03/31/08.

Additional CORE activity data available online at NJCleanEnergy.com.

From just 6 solar installations in 2001 to over 2,942 as of March 31, 2008, New Jersey has experienced unprecedented growth driven by the combination of rebates, financial incentives, and support provided by New Jersey's Clean Energy Program's Customer On-Site Renewable Energy (CORE) program. In fact, New Jersey is the fastest growing solar market in the country, with solar capacity installed in 2007 increasing by 114% from the amount of capacity installed in 2006!

Currently, New Jersey has over 54.8 MW of installed solar capacity, which puts us closer to our goal to install 90 MW of solar by the end of 2008. These solar electric systems are generating 54,847 megawatt hours** of traditional electricity, reducing carbon dioxide emissions by 65.5 million pounds. That's like removing 5,722 cars from the road or planting 8,845 acres of trees. New Jersey also achieves significant benefits for the economy by reducing our dependence on imported energy and creating jobs and economic growth as the industry continues to grow in New Jersey and the nation.

**Based on 1,000 kWh per year PV capacity factor. Prior estimates assumed 1,200 kWh per year for PV capacity factor.

Who's Going Solar?

Following are some of the businesses, non-profits, schools, and governmental organizations in New Jersey which have installed solar electric systems with support from New Jersey's Clean Energy Program.
