

Food Service Equipment

Get the recipe for money-saving solutions!

Here's some food for thought: per square foot, restaurants use five to seven times the energy of other commercial facilities. For quick-service restaurants that specialize in high volume, that figure is closer to ten times the energy use of the typical office or retail store.

The commercial food sector uses approximately \$10 billion worth of energy nationwide each year. These higher energy costs are a result of the refrigeration; lighting; sanitation; heating, ventilation, and air conditioning; and food preparation your business requires.

You can make a huge impact on your facility's energy use and profitability with incentives available through *New Jersey's Clean Energy Program*, an easy and effective way to improve your bottom line. Incentives are available from the SmartStart Buildings Program for the following kitchen equipment:
