

Anemometer Loan Program

Data Results and Project Progress

[A Little About Our Center...

CENTER FOR ADVANCED
ENERGY SYSTEMS

Established in 1992 by Professor Michael R. Muller

“A multi-disciplined, full service center including thrusts in research, teaching, and outreach in response to an emerging national emergency, and fertile opportunities for important advances in technology and significant student interest”

[A Little About Our Center...

- Our Other Programs...
 - Industrial Assessment Center Program (IAC)
 - Funded by Department of Energy
 - Field Managers
 - Free Assessments for Industries
 - Focus on Industrial Energy Efficiency
 - New Jersey Manufacturer's Excellence Program (NJME)
 - Funded by NJ Department of Environmental Protection
 - IAC-Style program for New Jersey
 - Focus on Pollution Prevention (P2)

[Down to Business...

- Overview of today
 - Our Resource Assessment Method and Apparatus
 - Equipment Used
 - Data Analysis Techniques
 - REPORT: Stanley Theater, Jersey City
 - REPORT: Totten Family Farm, Hackettstown

Resource Assessment Method

- Anemometer Towers purchased from NRG Systems
- 20 m TallTower
- Logs Wind Speed(MPH), Direction(Degrees), Timestamp
- Time-averaged at 10 minute intervals
- Plug can collect >6 months of data.

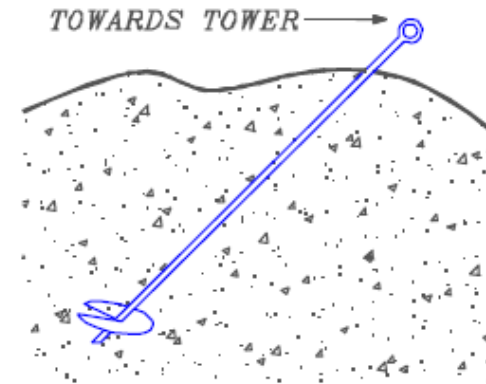

Resource Assessment Method

- Project Components
 - Site Selection
 - 1st come, 1st serve basis, queue of about 10 clients
 - Tower Installation
 - Team of 4-6 people
 - 1 full work day to install
 - Data Collection @ 6 - month mark
 - Switch out data plugs, change the battery
 - Tower Take-Down
 - Team of 3-5 people
 - 1/2 – 1 work day (depending on anchors)
 - Data Retrieval and Analysis

[Problems with Installation

- Anchors!
 - **Screw-In anchors** useful if there are no rocks
 - **Screw-In anchors** useless if it hits 1 rock
 - Ended up using **Arrowhead anchors**
 - Easier to get in, very hard to get out
 - Hint: Put some oil on the tip of the rebar before you hammer in the arrowheads

[Problems with Take-Down

- Make sure you use TWO carabiners to distribute the top and bottom guys onto.
 - If not, you'll rip your baseplate in half
- Digging up the arrowheads

[Data Analysis

- Wind with velocity V_1 has kinetic energy of $(1/2)mV_1^2$
- Wind also has a mass flux across a cross sectional area A of:

$$\text{Mass Flux} = \rho \times A \times V_1$$

- Power is the flux of energy (Energy/time)

$$\begin{aligned}\text{Power} &= \text{flux of kinetic energy} \\ &= (1/2) \times \text{mass flux} \times V_1^2 \\ &= (1/2) \times \rho \times A \times V_1^3\end{aligned}$$

[Data Analysis

- So, Power = $\frac{1}{2} \times \rho \times A \times V_1^3$
- Power / Area = $\frac{1}{2} \times \rho \times V_1^3$
- This is called the **power density**
- Units: W / m²
- Area is the circle created from the diameter of the blades

[Data Analysis

- Since power varies proportional to the cubic of velocity, taking the average velocity and plugging it into the equation does not give accurate results.
- Velocities are therefore classified into bins, usually 0.5 m/s.
- Cut-In speed for most turbines is > 3 m/s, so speeds under 3 m/s are neglected

[Stanley Theater

- Heart of Jersey City, in Journal Square
- They claimed high wind speeds on the roof, and had scaffolding in place to site the anemometer.

[Analysis Results

[Analysis Results

Data Analysis

[Data Analysis

[Conclusions...

- Average Wind Speed: 3.2 m/s
- Average Power Density : 29.7 W/m
- Wind speeds below cut-in speed 55% of the time.
- Turbulence Intensity of 30%
- NOT a good spot for a turbine.
 - Maybe a VAWT?

[Totten Family Farms

- Hackettstown, NJ
 - Far north
 - Inland
 - Plenty of space for turbines

Totten Family Farms

Totten Family Farms Monthly Averaged Wind Speed

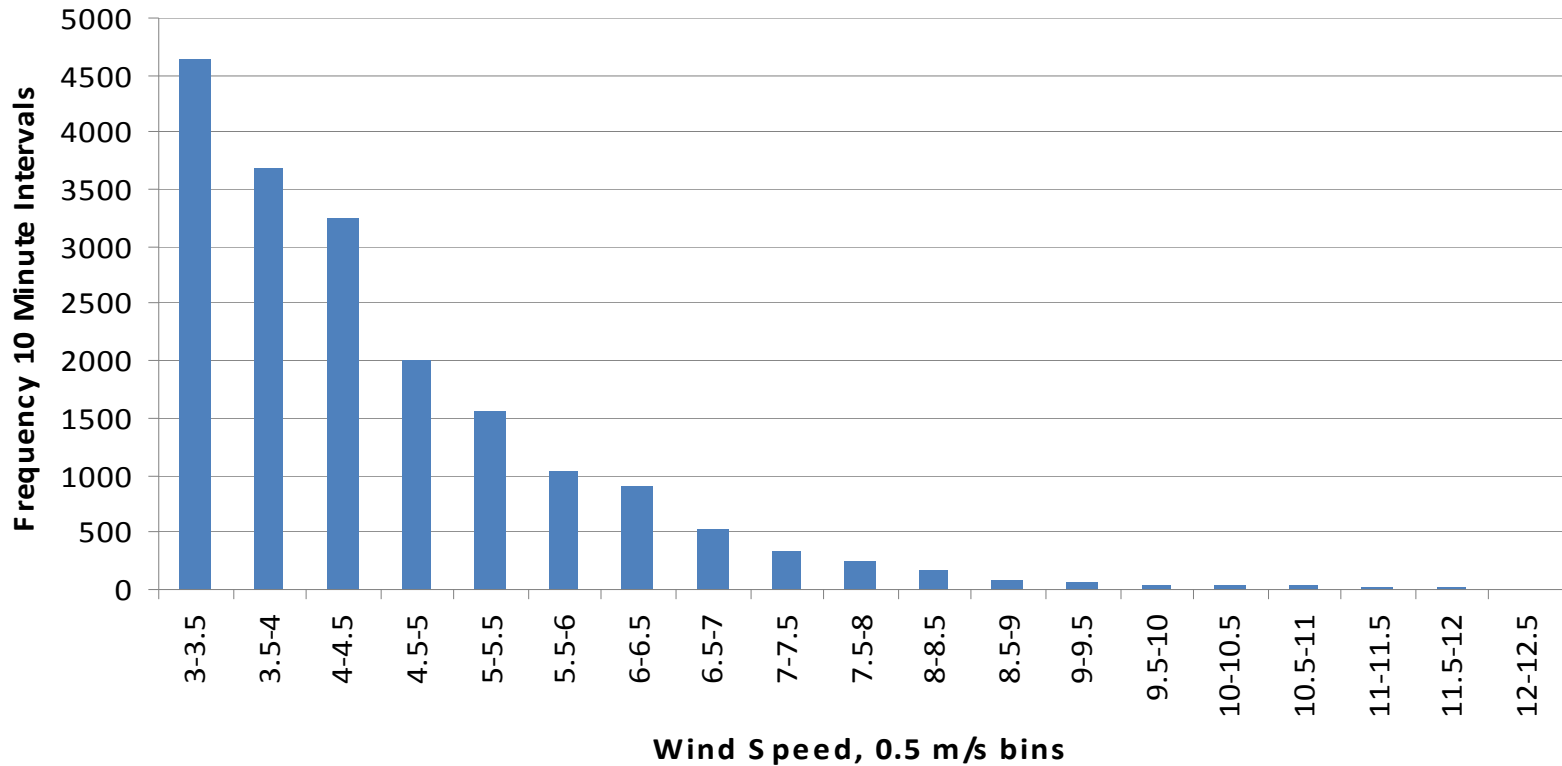

Totten Family Farms

Totten Family Farm, Wind Speed Distribution

Totten Family Farms

Totten Family Farm, Wind Speed Distribution

[Conclusions...

- Average Wind Speed: 3.7 m/s
- Average Power Density : 49 W/m
- Wind speeds below cut-in speed 39% of the time.
- Turbulence Intensity of 34%
- Better spot for a turbine, but far from being cost-effective.
