

Customer Onsite Renewable Energy (CORE) Rebate Commitment Queue *Private Sector Projects Greater than 10 kW – Updated August 24, 2007*

The following list contains the queue of private sector applications for private sector projects greater than 10 kW in size awaiting rebate commitment approval in the Customer Onsite Renewable Energy (CORE) Program.

The table shows projects' order for rebate processing as of August 24, 2007, and supersedes the table dated August 13, 2007.

The NJ Clean Energy Program specifies guidelines and procedures that enable new commitments within a queue to the extent that the estimated amount paid does not exceed the CORE budget for a given category. As previously posted in the CORE rebate application, the CORE technical work sheets and the CORE Guidelines and Procedures, the Board reserves the right to change rebate offerings without notice.

Next steps for applicants/installers:

1. Correct any incorrect information regarding your project. If the information on your project in this table incorrect, please contact 866-NJSMART to have it updated.
2. Ensure that your application paperwork is complete and submitted as soon as possible. Commitment approvals by the Office of Clean Energy are contingent on applicants/installers submitting a complete application (Note 1). Once an application package is complete and funding is available OCE will issue a project commitment letter (Note 2).

Complete applications will be approved in the order listed. Incomplete applications will be bypassed.

Note 1: Queue positions are determined on the basis of the date in which an application is deemed to be complete. Applications which contain all of the following information are deemed to be completed:

- 1) Completed CORE rebate application, 2) Completed technical worksheet, 3) A site map, 4) 12 months kWh usage from actual bills or estimated list of loads for new construction, 5) Proper signatures on all forms, 6) A 10 year certification form indicating applicant will return pro-rated rebate if equipment is moved outside of NJ, 7) Copy of signed contract with installer.

Completed applications for Non Solar Projects (Biomass, Fuel Cell and Wind) will be placed at the top of their respective queue category.

Note 2: Projects that are likely to receive a project commitment letter based upon currently approved 2007 budget levels may be determined as described below.

- 1) Determine the cumulative amount of rebate funds that would be required to fund your project and all projects ahead of you in the queue.
- 2) Refer to the updated Market Manager Report B4: 2007 Budget Status Column E, 2007 Uncommitted Funds and the appropriate budget category to determine the amount of funding available.
- 3) Project approvals will be granted to applications that have passed a final review to confirm that the application meets all program requirements up to the available budget amount.

Applicants and vendors that construct their facility before receiving a CORE rebate approval letter do so entirely at their risk.
