

New Jersey SmartStart Buildings® Program

State-wide Program Administration Changes

The New Jersey Board of Public Utilities has recently implemented welcome changes to the NJ SmartStart Buildings Program – changes designed to streamline program administration for commercial and industrial customers. TRC Energy Services, an engineering, consulting and construction management firm with a thirty-six year history of success in the industry, is now the Market Manager responsible for managing all aspects of the program.

Business owners, facility managers, school board and municipal representatives, and the architect and engineering design community can now turn to one point of contact for assistance in planning and implementing energy-efficient construction and retrofit projects – anywhere across the state. Rather than working with individual electric and gas utility companies depending on the specific location of each project, program participants will now work with TRC Energy Services for design assistance, processing applications, inspections and incentive payments.

INCENTIVES for an
Energy-Efficient New Jersey

Program Overview

The NJ SmartStart Buildings Program provides significant financial incentives and design assistance for commercial and industrial customers incorporating energy efficiency measures into their new construction and retrofit projects. To be eligible, projects must be registered and pre-approved, so be sure to contact TRC Energy Services early in the design process. We'll guide you through the application procedures and explain the options for incorporating qualified equipment, energy efficiency measures, and even a combined heat and power alternative.

Keeping Informed

Over the years, the NJ SmartStart Buildings website has served as a primary source of information for commercial and industrial customers as well as the trade ally community.

The site (www.njsmartstartbuildings.com) will continue to serve as a valuable entry point for program details and project applications. We invite you to follow the Contact link and subscribe to our mailing list. Whenever there are program enhancements, changes to incentives, rules, or efficiency levels, we want you to be among the first to be kept informed.

New Jersey's Clean Energy Program

NJ SmartStart Buildings is part of the New Jersey Board of Public Utilities' Clean Energy Program. This state-wide initiative provides information and incentives to residents, businesses and communities helping to reduce energy use, lower costs and improve our environment. Be sure to visit www.njcleanenergy.com to learn about the many opportunities for residential customers, including renewable technologies like solar and wind power.
