NEW JERSEY'S CLEAN ENERGY PROGRAM™

Join the thousands of New Jersey homeowners, businesses and municipalities that have taken advantage of the programs, services and incentives offered by *New Jersey's Clean Energy Program*. These programs provide opportunities for you to save energy, money and help provide climate solutions. You'll also help reduce greenhouse gas emissions, energy use and increase renewable energy use.

RESIDENTIAL PROGRAMS

Home Performance with ENERGY STAR®

Contractors certified by the Building Performance Institute (BPI) work with homeowners to identify sources of wasted energy and help make money saving improvements. Attractive incentives and zero interest loans are available to help homeowners pay for recommended work.

New Jersey ENERGY STAR Homes

New Jersey ENERGY STAR Homes are built to be more energy efficient than standard homes. They cost less to operate and lessen the impact of power generation on the environment.

ENERGY STAR Qualified Products

A rebate is available to properly recycle old refrigerators and/or freezers. Discounted light bulbs and fixtures are also available through our online store.

New Jersey Comfort Partners

This program helps qualified low-income customers learn how to save energy and money. Certified BPI contractors install energy saving measures at no cost to make homes more energy efficient.

COOLAdvantage and WARMAdvantage Programs

Incentives are available for energy efficient heating and cooling equipment, such as furnaces, boilers, water heaters and heat pumps, including geothermal heat pumps.

RENEWABLE ENERGY

Solar Renewable Energy Certificate (SREC) Registration Program

The SREC Registration Program is used to register the intent to install solar projects in New Jersey. Owners of solar projects must register their projects prior to the start of construction in order to establish the project's eligibility to earn SRECs.

Renewable Energy Incentive Program

Financial incentives are available to reduce the upfront installation costs for sustainable biopower systems. Rebate levels vary depending upon technology, system size and customer type.

CleanPower Choice ProgramSM

A voluntary program that gives retail electricity customers the option to sign up for clean power directly through their local electric utility. Participants invest in renewable power technologies, such as wind, solar, hydro and landfill gas without installing any equipment to their home or business. Enrollment means customers agree to pay a little more on their regular electric bill.

COMMERCIAL, INDUSTRIAL & GOV'T

New Jersey SmartStart Buildings®

This comprehensive initiative provides incentives for high efficiency lighting and lighting controls, heating and cooling equipment, water heating, variable frequency drives, refrigeration covers and controls and a number of other measures, including a custom path for new technologies.

Direct Install

Created specifically for existing small to medium-sized facilities with peak demand no greater than 150 kW, Direct Install pays up to 70% of the project cost for replacing lighting, HVAC and other outdated operational equipment with energy efficient alternatives.

Benchmarking

This free service evaluates the energy use performance of eligible buildings by comparing data from similar facilities. Identifying which facilities are the most and least energy-efficient can be an effective method for targeting operations and maintenance efforts and significantly increasing energy savings. Benchmarking reports also include guidance on selecting the right NJCEP opportunities for projects.

Pay for Performance

Designed for existing or new large buildings with monthly peak demand in excess of 100 kW, Pay for Performance offers a comprehensive, whole-building approach with incentives that are directly linked to energy savings. Program partners provide technical services, energy reduction plans, financial plans for funding the project and a construction schedule for implementation.

Local Government Energy Audit

Available to qualifying local governments, non-profits and state colleges and universities, participants receive up to 100% of the cost of a detailed audit from one of the pre-qualified auditing firms selected by the state.

Combined Heat and Power and Fuel Cells

Incentives are provided up to the first megawatt of installed capacity for on-site power generation with recovery and productive use of waste heat. A range of incentive levels exist depending on eligible technology, a number of which may qualify for bonuses and utility matching. Large scale CHP projects may be eligible for a grant, which is administered jointly by the BPU and EDA.
