

Dear New Jersey Residents:

Happy New Year! Thank you for your participation in New Jersey's Clean Energy *WARM*Advantage and *COOL*Advantage HVAC Programs. We would like to make you aware of a new change and also remind you of changes that went into effect previously.

- The Boiler Reset Control incentive (part of *WARM*Advantage) has a new Annual Fuel Utilization Efficiency (AFUE) requirement starting with purchases made on 3/1/14. After market boiler reset controls can be installed on new and existing boilers provided the boiler AFUE is less than 85%. Boiler resets installed on boilers at or above 85% AFUE no longer qualify for incentives. The program application forms are [on the website](#).
- As a reminder, as of 8/1/13, the qualifying minimum Seasonal Energy Efficiency Ratio (SEER) and Energy Efficiency Ratio (EER) criteria for ductless mini-split central A/C systems or mini-split heat pump systems are 17 SEER and 13 EER.
- Please note that all incentive applications for the *WARM*Advantage and *COOL*Advantage programs should be post-marked within 180 days of the purchase date in order to be eligible.

Please call 866-NJSMART should you have any questions.

Thank you for your continued support!

New Jersey's Clean Energy Program
