

July 23<sup>rd</sup>, 2009: Effective with this notice there will be changes to the NJCEP NJ SmartStart Buildings Program Custom Electric and Custom Gas Application incentive calculations that will be applicable to any new applications received subsequent to this notice. In addition to using the existing screening tools, the Market Manager will be using other cost effectiveness criteria including a cap of \$ .16/kWh and \$1.60/therm to establish the appropriate level of project incentive. These modifications are to help further align the amount of incentive to the potential energy savings.
