BPU President Richard Mroz
NJ

Dear BPU President Mroz,

Thank you for the opportunity to comment on the FY2016 Comprehensive Resource Analysis for the New Jersey Clean Energy Program. The CRA is a step in the right direction. However, every year hundreds of millions of dollars are lapsed from the Clean Energy Program to fill budget holes. This money is supposed to go toward energy efficiency and renewable energy programs to help reduce pollution.

It is the responsibility of the Board of Public Utilities to ensure that the Clean Energy Program is fully-funded and efficiently managed. Underperformance and budgetary lapses have been ongoing issues for six years. It is time for the BPU to act and make the changes needed to ensure utility investments in efficiency and a solid regulatory framework for state programs. I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

Cutting energy waste is the cheapest and best way to reduce pollution. I have done my part by (share what you have done or are doing to save energy). But individual actions are not enough. We need strong state policies to save energy and cut carbon. It is time for New Jersey to do its part to curb our share of climate pollution.

Sincerely,

Katie Reilly

The contract that the Board of Public Utilities entered into with the people of NJ is to spend the money as announced and nothing short of that will suffice. Nothing that Governor Christie tries to pull should supersede that! It's OUR money we pay in taxes and should be spent for the Public good (i.e. Clean Energy, as promised) and must be utilized as such.

Sincerely,

I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

Using the funds in the clean energy fund toward the general state budget in effect makes it a "stealth" tax, and a regressive one at that. The clean energy program should be used for clean energy.

BPU President Richard Mroz
NJ

Dear BPU President Mroz,

Thank you for the opportunity to comment on the FY2016 Comprehensive Resource Analysis for the New Jersey Clean Energy Program. The CRA is a step in the right direction. However, every year hundreds of millions of dollars are lapsed from the Clean Energy Program to fill budget holes. This money is supposed to go toward energy efficiency and renewable energy programs to help reduce pollution.

It is the responsibility of the Board of Public Utilities to ensure that the Clean Energy Program is fully-funded and efficiently managed. Underperformance and budgetary lapses have been ongoing issues for six years. It is time for the BPU to act and make the changes needed to ensure utility investments in efficiency and a solid regulatory framework for state programs. I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

Cutting energy waste is the cheapest and best way to reduce pollution. But individual actions are not enough. We need strong state policies to save energy and cut carbon. It is time for New Jersey to do its part to curb our share of climate pollution.

Sincerely,

Ann Despont

This 'Governor', AKA Christie, does nothing except that there is something for him personally in it. To suggest that his interests are completely different from those of the State of New Jersey is a gross understatement. That he claims to be running for 'higher office' is a travesty of what the United States is all about.

The best part is that the 'Press' ennobles his arrogance by printing his rubbish verbatim without giving any critical analysis whatsoever.

I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

Good Evening,

Cutting energy waste is the cheapest and best way to reduce CO2 emissions. Individual actions is not enough. We as a state need strong state policies to serve as the basis/framework from which New Jersey as a whole can begin to excel from in order to save energy, cut carbon emissions, and ultimately transition from a broken system into a fully sustainable state. It is time for New Jersey to do its part to curb our share of climate pollution. So please take this message as a serious reminder that we must begin to move forward and really progress as a state away from fossil fuel consumption in a renewable and sustainable state. Please contact me at olacior1@mail.montclair.edu because when I get back from Costa Rica, Ethiopia, and Dominican Republic from my studies/international research on Sustainable Development I am going aspire to be a strong voice in these types of conversation of New Jersey's future, and I personally do not take that lightly as many other politicians/representatives currently are.

Sincerely,
Ralph Olacio

Underperformance and budgetary lapses have been ongoing issues for six years. It is time for the BPU to act and make the changes needed to ensure utility investments in efficiency and a solid regulatory framework for state programs. I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

Cutting energy waste is the cheapest and best way to reduce pollution. But individual actions are not enough. We need strong state policies to save energy and cut carbon. It is time for New Jersey to do its part to curb our share of climate pollution.

Sincerely,

Erik Ramos

Dear BPU President Mroz,

Thank you for the opportunity to comment on the FY2016 Comprehensive Resource Analysis for the New Jersey Clean Energy Program. The CRA is a step in the right direction. However, every year hundreds of millions of dollars are lapsed from the Clean Energy Program to fill budget holes. This money is supposed to go toward energy efficiency and renewable energy programs to help reduce pollution.

It is the responsibility of the Board of Public Utilities to ensure that the Clean Energy Program is fully-funded and efficiently managed. Underperformance and budgetary lapses have been ongoing issues for six years. It is time for the BPU to act and make the changes needed to ensure utility investments in efficiency and a solid regulatory framework for state programs. I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

Cutting energy waste is the cheapest and best way to reduce pollution. But individual actions are not enough. We need strong state policies to save energy and cut carbon. It is time for New Jersey to do its part to curb our share of climate pollution.

Sincerely,

David Mikkelsen

It is time for the BPU to act and make the changes needed to ensure utility investments in efficiency and a solid regulatory framework for state programs. I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

Cutting energy waste is the cheapest and best way to reduce pollution. But individual actions are not enough. We need strong state policies to save energy and cut carbon. It is time for New Jersey to do its part to curb our share of climate pollution.

Sincerely,

Kierstin Meyer

Dear BPU President Mroz,

Thank you for the opportunity to comment on the FY2016 Comprehensive Resource Analysis for the New Jersey Clean Energy Program. The CRA is a step in the right direction. However, every year hundreds of millions of dollars are lapsed from the Clean Energy Program to fill budget holes. This money is supposed to go toward energy efficiency and renewable energy programs to help reduce pollution.

It is the responsibility of the Board of Public Utilities to ensure that the Clean Energy Program is fully-funded and efficiently managed. Underperformance and budgetary lapses have been ongoing issues for six years. It is time for the BPU to act and make the changes needed to ensure utility investments in efficiency and a solid regulatory framework for state programs. I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

Cutting energy waste is the cheapest and best way to reduce pollution. But individual actions are not enough. We need strong state policies to save energy and cut carbon. It is time for New Jersey to do its part to curb our share of climate pollution.

Sincerely,

Lori Sudol

I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

Cutting energy waste is the cheapest and best way to reduce pollution, starting in all state, county, and municipal offices! But individual actions are not enough. We need strong state policies to save energy and cut carbon. Sustainable programs MUST be encouraged, held accountable, and be eligible for tax credits for meeting goals. State, county, and municipal offices should also be accountable for energy usage, as should landlords to whom the county welfare agencies pay rent for homeless clients! These places are not even inspected by case workers before clients are given the okay to sign a lease. It is time for New Jersey to do its part to curb our share of climate pollution.

Sincerely,

Joy Sullivan

Gov, get your head out of the sand (I could have said something else but I'm being polite) -- stop the politics, you were elected as Governor not a pathway to the White House. For once do what's right and start thinking about the State and it's people.

The climate and energy is all about science and facts. It doesn't matter what you believe, reality is what's important, sooo Govern based on reality not political fantasy.

NJ

Dear BPU President Mroz,

Thank you for the opportunity to comment on the FY2016 Comprehensive Resource Analysis for the New Jersey Clean Energy Program. The CRA is a step in the right direction. However, every year hundreds of millions of dollars are lapsed from the Clean Energy Program to fill budget holes. This money is supposed to go toward energy efficiency and renewable energy programs to help reduce pollution.

It is the responsibility of the Board of Public Utilities to ensure that the Clean Energy Program is fully-funded and efficiently managed. Underperformance and budgetary lapses have been ongoing issues for six years. It is time for the BPU to act and make the changes needed to ensure utility investments in efficiency and a solid regulatory framework for state programs. I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

Cutting energy waste is the cheapest and best way to reduce pollution. But individual actions are not enough. We need strong state policies to save energy and cut carbon. It is time for New Jersey to do its part to curb our share of climate pollution.

Sincerely,

Randolph Barbiero

I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

President Mroz,

I believe encouraging the use of distributed solar power (panels on residential and business/industrial rooftops) top of is a good way to encourage individuals and businesses to have a personal stake in the efficient generation and consumption of renewable energy. Also, I believe utility companies and government buildings and campuses should be served by renewable solar energy. I am against money being removed from the Clean Energy Fund to fund any other programs. In addition it is time that a state law mandates the installation of solar panels and "green building features" on all new construction in the State of New Jersey and "green" design requirements such as orientation of streets and buildings for maximum solar utilization should be mandatory in all building and zoning codes. the Romans were using solar design principles thousands of years ago. Cutting energy waste is the cheapest and best way to reduce pollution and to have the remaining funds we need to fund the State of New Jersey efficiently while keeping taxes low. But individual actions are not enough. We need strong state policies to save energy and cut carbon. It is time for New Jersey to do its part to curb our share of climate pollution.

Sincerely,

PLEASE STOP STEALING NEW JERSEY TAX DOLLARS MONEY!!!

LOOK UP!!!!!!! CLEARLY SOMETHING IS (UP).....

STOP USING CLEAN ENERGY MONEY TO POLLUTE THE SKIES!!!

TELL YOUR BIG OIL BUDDIES TO STOP SPRAYING THE SKY WITH CHEMICALS.

WHY DO THEY FOLLOW THE SUNRISE/SUNSET??? PROBABLY TO HIDE THE SUN, SO THAT WE CAN'T USE SOLAR POWER AND HAVE TO RELY ON ELECTRICITY AND FOSSIL FUELS.

MY ENERGY BILLS HAVE BEEN \$700 MONTHLY FOR A FAMILY OF 2.

MY ENERGY COMPANY REFUSES TO READ MY METER ON A MONTHLY BASIS. THEY COME WHEN THEY FEEL LIKE IT AND EXPECT ME TO PAY \$1000 FOR AN ESTIMATED BILL AND FOR ENERGY I HAVE NOT USED.

THEY SHOULD NOT BEL ALLOWED TO ESTIMATE BILLS - P.E.R.I.O.D.

IT'S A CRIME WHAT BASIC UTILITY COMPANIES GET AWAY WITH.....

STOP STEALING MY ENERGY AND MAKING ME(WE) PAY FOR YOURS!!!

Sincerely,

Nicole Falkowitz

BPU President Richard Mroz
NJ

Dear BPU President Mroz,

Thank you for the opportunity to comment on the FY2016 Comprehensive Resource Analysis for the New Jersey Clean Energy Program. The CRA is a step in the right direction. However, every year hundreds of millions of dollars are lapsed from the Clean Energy Program to fill budget holes. This money is supposed to go toward energy efficiency and renewable energy programs to help reduce pollution.

It is the responsibility of the Board of Public Utilities to ensure that the Clean Energy Program is fully-funded and efficiently managed. Underperformance and budgetary lapses have been ongoing issues for six years. It is time for the BPU to act and make the changes needed to ensure utility investments in efficiency and a solid regulatory framework for state programs. I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

Cutting energy waste is the cheapest and best way to reduce pollution. But individual actions are not enough. We need strong state policies to save energy and cut carbon. It is time for New Jersey to do its part to curb our share of climate pollution.

Sincerely,

Samuel Rob

DO NOT let the governor take the funds destined for clean energy. He has proven time and again that he raids other programs to cover his inability to manage the state. He has already raided my pension fund, I am a teacher by profession. Failed to come through on the hurricane Sandy promises he made, I lost my summer place to his inability to manage the funds the federal government gave us. He can't handle governance, he should have stayed in the prosecutors office where his bullying tactics served him well.

Using supposed energy efficiency designated funds to plug budget holes created by other unrelated problems and poor tax policies is an abuse of NJ taxpayers. It is your responsibility to see that the monies are used for energy efficiency and conservation. But my individual actions have only a very limited impact. We need strong state policies to save energy and cut carbon. New Jersey must do its part to curb climate pollution. We can not allow Governor Christie to continue to plunder our state's resources to benefit his wealthy cronies with tax gifts.

BPU President Richard Mroz
NJ

Dear BPU President Mroz,

Thank you for the opportunity to comment on the FY2016 Comprehensive Resource Analysis for the New Jersey Clean Energy Program. The CRA is a step in the right direction. However, every year hundreds of millions of dollars are lapsed from the Clean Energy Program to fill budget holes. This money is supposed to go toward energy efficiency and renewable energy programs to help reduce pollution.

It is the responsibility of the Board of Public Utilities to ensure that the Clean Energy Program is fully-funded and efficiently managed. Underperformance and budgetary lapses have been ongoing issues for six years. It is time for the BPU to act and make the changes needed to ensure utility investments in efficiency and a solid regulatory framework for state programs. I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

Cutting energy waste is the cheapest and best way to reduce pollution. But individual actions are not enough. We need strong state policies to save energy and cut carbon. It is time for New Jersey to do its part to curb our share of climate pollution.

Sincerely,

D Reu

Cutting energy waste is the cheapest and best way to reduce pollution. But individual actions are not enough. We need strong state policies to save energy and cut carbon. It is time for New Jersey to do its part to curb our share of climate pollution.

I don't mind a small surcharge on my energy bill going toward energy efficiency and renewable energy programs to help reduce pollution. I do mind a surcharge for this purpose being siphoned off and sent to prop up the general fund.

Sincerely,

Robert Watrous

Christie's raiding of funds puts the entire budgeting process at risk. Nothing like discouraging an already autocratic governor.

Please spend this fun's money wisely.

BPU President Richard Mroz
NJ

Dear BPU President Mroz,

Thank you for the opportunity to comment on the FY2016 Comprehensive Resource Analysis for the New Jersey Clean Energy Program. The CRA is a step in the right direction. However, every year hundreds of millions of dollars are lapsed from the Clean Energy Program to fill budget holes. This money is supposed to go toward energy efficiency and renewable energy programs to help reduce pollution.

It is the responsibility of the Board of Public Utilities to ensure that the Clean Energy Program is fully-funded and efficiently managed. Underperformance and budgetary lapses have been ongoing issues for six years. It is time for the BPU to act and make the changes needed to ensure utility investments in efficiency and a solid regulatory framework for state programs. I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

Cutting energy waste is the cheapest and best way to reduce pollution. But individual actions are not enough. We need strong state policies to save energy and cut carbon. It is time for New Jersey to do its part to curb our share of climate pollution.

Sincerely,

Norman & Linda Pugliese

BPU President Richard Mroz
NJ

Dear BPU President Mroz,

Thank you for the opportunity to comment on the FY2016 Comprehensive Resource Analysis for the New Jersey Clean Energy Program. The CRA is a step in the right direction. However, every year hundreds of millions of dollars are lapsed from the Clean Energy Program to fill budget holes. This money is supposed to go toward energy efficiency and renewable energy programs to help reduce pollution.

It is the responsibility of the Board of Public Utilities to ensure that the Clean Energy Program is fully-funded and efficiently managed. Underperformance and budgetary lapses have been ongoing issues for six years. It is time for the BPU to act and make the changes needed to ensure utility investments in efficiency and a solid regulatory framework for state programs. I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

Cutting energy waste is the cheapest and best way to reduce pollution. But individual actions are not enough. We need strong state policies to save energy and cut carbon. It is time for New Jersey to do its part to curb our share of climate pollution.

Sincerely,

William Pell

NJ

Dear BPU President Mroz,

Thank you for the opportunity to comment on the FY2016 Comprehensive Resource Analysis for the New Jersey Clean Energy Program. The CRA is a step in the right direction. However, every year hundreds of millions of dollars are lapsed from the Clean Energy Program to fill budget holes. This money is supposed to go toward energy efficiency and renewable energy programs to help reduce pollution.

It is the responsibility of the Board of Public Utilities to ensure that the Clean Energy Program is fully-funded and efficiently managed. Underperformance and budgetary lapses have been ongoing issues for six years. It is time for the BPU to act and make the changes needed to ensure utility investments in efficiency and a solid regulatory framework for state programs. I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

Cutting energy waste is the cheapest and best way to reduce pollution. But individual actions are not enough. We need strong state policies to save energy and cut carbon. It is time for New Jersey to do its part to curb our share of climate pollution.

Sincerely,

Jennifer Terrill

stop taking money that does not belong to you! This money is there for a good cause not for you to plug holes in a structure that you have failed to keep upright. we need clean energy as well as clean water and air. If this is not done then you will need more money to plug holes in all the other problems that will occur like trucking in water we need, cleaning up toxic waste and spiraling decline in health.

Sincerely,

Amongst other things that means discharging your responsibilities in a politically neutral and unbiased manner. The governor has his responsibilities too but it's not appropriate for him to shirk those by subverting the role of the BPU in New Jersey's energy management.

New Jersey needs more funding for clean energy and energy efficiency programs. That's the message you should send to Governor Christie.

BPU President Richard Mroz
NJ

Dear BPU President Mroz,

Thank you for the opportunity to comment on the FY2016 Comprehensive Resource Analysis for the New Jersey Clean Energy Program. The CRA is a step in the right direction. However, every year hundreds of millions of dollars are lapsed from the Clean Energy Program to fill budget holes. This money is supposed to go toward energy efficiency and renewable energy programs to help reduce pollution.

It is the responsibility of the Board of Public Utilities to ensure that the Clean Energy Program is fully-funded and efficiently managed. Underperformance and budgetary lapses have been ongoing issues for six years. It is time for the BPU to act and make the changes needed to ensure utility investments in efficiency and a solid regulatory framework for state programs. I urge the Board of Public Utilities to adopt fully-funded, binding energy savings targets for CEP and the electric utilities.

Cutting energy waste is the cheapest and best way to reduce pollution. But individual actions are not enough. We need strong state policies to save energy and cut carbon. It is time for New Jersey to do its part to curb our share of climate pollution.

Sincerely,

Edythe Ben-Israel
