LIST OF ACRONYMS

- AEG: Applied Energy Group
- Board or BPU: New Jersey Board of Public Utilities
- C&I: Commercial & Industrial
- CEA: Clean Energy Act of 2018
- CRA: Comprehensive Energy Efficiency & Renewable Energy Resource Analysis
- DCE: Division of Clean Energy
- DEP: Department of Environmental Protection
- ECC: Energy Capital Committee
- EDA: Economic Development Authority
- EDC: Electric Distribution Company
- EDECA: Electric Discount and Energy Competition Act
- EE: Energy Efficiency
- EMP: Energy Master Plan
- EO: Executive Order
- FC: Fuel Cell
- FY: Fiscal Year
- HVAC: Heating, Ventilation and Air Conditioning
- NJCEP: New Jersey's Clean Energy Program
- NJIT: New Jersey Institute of Technology
- OSW: Offshore Wind
- OWEDA: Offshore Wind Economic Development Act
- Pilot Program: Community Solar Pilot Program
- RCGB: Rutgers University's Center for Green Buildings
- RE: Renewable Energy
- RFP: Request for Proposal
- RPS: Renewable Portfolio Standard
- SBC: Societal Benefits Charge
- SEO: State Energy Office
- SREC: Solar Renewable Energy Certificates
- TRC: TRC Energy Solutions

EXECUTIVE SUMMARY

On February 9, 1999, the Electric Discount and Energy Competition Act (EDECA) was signed into law, which, among other things, created the societal benefits charge (SBC) to fund programs for the advancement of energy efficiency (EE) and Class I renewable energy (RE) technologies and markets in New Jersey. EDEC also charged the New Jersey Board of Public Utilities (Board or BPU) with initiating proceedings and undertaking a comprehensive energy efficiency and renewable energy resource analysis in New Jersey. The comprehensive resource analysis (CRA) would be used to determine the level of funding for EE and Class I RE programs statewide. Collectively, these programs form New Jersey's Clean Energy Program (NJCEP).™ Over the past 20 years, the programs have significantly reduced energy usage, reduced greenhouse gas emissions, delivered clean, local sources of renewable energy, and resulted in billions of dollars of energy cost savings to New Jersey ratepayers.

From 2001 through 2011 (FY12), the Board established four-year funding levels as envisioned in the Act. Since 2012, the CRA has provided a single year funding level in order to advance the goals of NJCEP.¹

On January 31, 2018, Governor Phil Murphy signed Executive Order No. 8. (EO8), which directed the BPU and all agencies with responsibility under the Offshore Wind Economic Development Act (OWEDA) to “take all necessary action” to fully implement OWEDA and begin the process of moving New Jersey towards a goal of 3,500 megawatts of offshore wind energy generation by the year 2030. On November 19, 2019, Governor Murphy signed Executive Order No. 92 (EO92), which increased the goals for offshore wind energy generation to 7500 megawatts by 2035.

On May 23, 2018, Governor Murphy signed the Clean Energy Act (CEA), which takes several critical steps to improve and expand New Jersey's renewable energy programs and establishes ambitious energy reduction targets. The CEA requires 21% of the energy sold in the state to be from Class I renewable energy sources by 2020; 35% by 2025; and 50% by 2030. Additionally, the CEA provides a platform to reform the state's solar program by making near-term structural changes to ensure that the program is sustainable over the long term and establishes a community solar energy program to allow all New Jersey residents to benefit from solar energy. Importantly, the CEA also established new energy savings targets of at least 2% annually for electric distribution companies and at least 0.75% for gas distribution companies.

HISTORY/BACKGROUND

¹ In the early years, the budgets and programs were based on calendar years, but in 2012, the Board approved the budgets and programs to be based on fiscal years to align with the overall State budget cycle.

The Board initiated its first CRA proceeding in 1999 and issued the first CRA Order in 2001. The 2001 Order set funding levels, the programs to be funded, and the budgets for each of those programs for the years 2001 through 2003. Since then, the Board has issued numerous orders setting the funding levels, related programs, and program budgets for the years 2004 – fiscal year 2019.

From 2001 to 2006, the state’s electric and natural gas utilities managed the programs. In 2004, the Board determined it would manage NJCEP going forward, and in 2005-2006, the Board issued RFPs to contract the necessary administrative services to assist in oversight. In 2006, the Board engaged Honeywell, Inc. to manage the RE and residential EE programs, and the Board engaged TRC to manage the C&I EE programs. In 2007, the Board engaged AEG as the NJCEP Program Coordinator. These contracts, following multiple extensions, terminated on March 31, 2016.

In April 2015, the Board, through the Department of the Treasury, Division of Purchase and Property (Treasury), issued RFP 16-X-23938 seeking proposals for a single Program Administrator to provide the services then being provided by Honeywell, TRC, and AEG (2015 RFP). On December 1, 2015, Treasury awarded the Program Administrator contract to AEG. Subsequently, on January 13, 2017, TRC Environmental Corporation acquired AEG’s New Jersey operation, including the NJCEP Program Administrator contract from AEG, and assumed AEG’s rights and obligations thereunder. TRC has subcontracted portions of the work under its contract to CLEAResult Consulting, Inc. and Energy Futures Group, Inc. AEG. TRC has managed programs since March 1, 2016, which marked the conclusion of the transition period set out in the RFP.

ENERGY MASTER PLAN

On May 23, 2018, Governor Murphy signed Executive Order No. 28 (EO28), directing the BPU to spearhead the committee to develop and deliver the new Energy Master Plan (EMP). The committee comprised senior staff designees from the following state agencies: Board of Public Utilities, Department of Community Affairs, Economic Development Authority, Department of Environmental Protection, Department of Health, Department of Human Services, Department of Transportation, Department of Labor and Workforce Development, and Department of the Treasury. The committee was tasked with developing a blueprint for the total conversion of the state’s energy production profile to 100% clean energy by January 1, 2050, with specific proposals to be implemented over the next 10 years.

On January 27, 2020, the 2019 EMP was unveiled following months of research, review, and stakeholder input. The EMP outlines seven key strategies to achieve 100% clean energy by 2050: Reduce Energy Consumption and Emissions from the Transportation Sector, Accelerate Deployment of Renewable Energy and Distributed Energy Resources, Maximize Energy Efficiency and Conservation and Reduce Peak Demand, Reduce Energy Consumption and Emissions from the Building Sector, Decarbonize and Modernize New

Jersey’s Energy System, Support Community Energy Planning and Action in Underserved Communities, and Expand the Clean Energy Innovation Economy.

PROPOSED FUNDING LEVELS

The funding recommendations for FY20 considered NJCEP’s historic results and forecasts for the year. Staff is recommending that the Board maintain a funding level of \$344,665,000 for FY20. Following the enactment of the COVID-19 Fiscal Mitigation Act, L. 2020, c. 19, this FY20 CRA Rev 2.0 implements the appropriate elements of the extension of FY20 through September 30, 2020 for all intents and purposes. The following table summarizes the initially approved budget for NJCEP funding.

FY20 Funding Levels - Third Budget Revision

| CEP Budget Category | Total FY20 Funding |
|---------------------------------|------------------------------|
| <i>Energy Efficiency</i> | |
| Residential | \$ 80,554,229 |
| Low Income | 45,500,000 |
| Commercial & Industrial | 190,384,155 |
| Multifamily EE | - |
| State Facilities | <u>56,588,873</u> |
| Energy Efficiency | \$ 373,027,257 |
| Distributed Energy Resources | 27,093,909 |
| Renewable Energy | 6,834,010 |
| EDA Programs | 113,236 |
| NJCEP Administration | 22,985,542 |
| "Path to 2050" Initiatives | <u>26,705,000</u> |
| NJCEP Total | \$ 456,758,955 |
| | - |
| State Energy Initiatives | <u>\$ 103,328,074</u> |
| Grand Total | \$ 560,087,029 |

ENERGY EFFICIENCY

The CEA directs both the Board and the state’s investor-owned electric and gas utilities to take action regarding EE. The CEA requires the Board to adopt an electric and gas EE program in order to ensure investment in cost-effective EE measures, ensure universal access to EE measures, and serve the needs of low-income communities.

Additionally, as previously noted, the CEA requires each electric public utility to achieve annual reductions in the use of electricity of at least 2% and each natural gas public utility to achieve annual reductions in the use of natural gas of at least 0.75% of the average annual usage in the prior three years within five years of implementation of its EE program.

In January 2019, the BPU contracted with Optimal Energy to conduct a market potential study. Staff has worked with the New Jersey Division of Rate Counsel, utilities, and other stakeholders and held four stakeholder meetings to advance the study.

On February 1, 2019, the BPU held a public meeting to solicit responses to 12 questions that would help guide the process and advance the design of the EE programs under the requirements of the CEA.

At the May 28, 2019 Board agenda meeting, the Board approved the following items to advance the goals of the CEA:

- The acceptance of the final “Energy Efficiency Potential in New Jersey” study;
- The adoption of the preliminary quantitative performance indicators related to electric and natural gas usage reduction targets; and
- The structure of the Advisory Group, whose members would provide insight on key elements of program implementation and evaluation for Staff’s use in the development of recommendations to the Board.

An extensive public stakeholder process continued in the late summer, fall and winter with 10 additional stakeholder and technical working group meetings, as well as regular meetings with the Energy Efficiency Advisory Group. Significant stakeholder comment was received, reviewed and incorporated and helped to refine three straw proposals (Program Administration, Cost Recovery, and Utility Targets), as well as a full straw proposal which resulted in Staff recommendations to the Board for the next generation of EE programs. On June 10, 2020, the Board approved an expansive EE program which highlighted an enhanced role for utilities and addressed issues such as utility-specific energy usage and peak demand reduction targets, program structure, cost recovery, utility filing requirements, program timeframes, evaluation, and reporting requirements. Staff will continue working with New Jersey’s investor-owned utilities, the New Jersey Division of Rate Counsel, and other stakeholders to ensure that the new framework is put into place fully, properly, and with minimal ratepayer impact. Utilities will be provided with adequate time in order to prepare their filings for a program start no sooner than July 1, 2021.

Staff anticipates utilizing the next year to carefully prepare for the transition of the EE programs as well as the anticipated needed growth in evaluation, measurement, and verification needed to ensure energy savings. Staff will also work to facilitate working groups to assist in the implementation of state and utility EE programs. Staff will finally work to procure appropriate studies and evaluations to assist in the determination of energy savings, cost effectiveness, code compliance, EE baselines, and other relevant assessments.

The FY20 NJCEP proposal provides continuation of funding for programs for residential, governmental, commercial, and industrial markets, including special incentives for low- to moderate-income eligible customers, with a particular focus on outreach and education to ensure equity in access to EE and development of a diverse EE workforce.

RENEWABLE ENERGY

Solar Transition

Pursuant to the CEA, the Board is transitioning from its legacy solar incentive program (SREC registration program) to a new Transition Incentive Program while the Board develops a new, long-term Successor Solar Incentive Program. A rule amendment approved by the Board on December 18, 2018 and published in the New Jersey Register on January 22, 2019 established that no new SREC registration program applications shall be accepted following a determination by the Board that 5.1% of the kilowatt hours sold in the state by each electric power supplier and each basic generation provider comes from solar electric power generators connected to the state's electric distribution system (5.1% milestone). By Orders dated October 29, 2018 and February 27, 2019, the Board reduced the SREC term (or Qualification Life) to 10 years for all applications submitted after October 29, 2019.

A proceeding is currently ongoing to provide options and recommendations as to how the Board can modify or replace the existing SREC program. A Staff straw proposal was published on December 26, 2018, which included seven "Transition Principles" and a proposed timeline for the transition process. A stakeholder notice published on April 8, 2019 accelerated the proposed timeline and announced additional stakeholder workshops. The Board undertook a subsequent rulemaking to amend the SREC registration processes to address the closure of the legacy SREC program and the methodology by which the Board would forecast and announce the attainment of the 5.1% milestone for closure. The rule amendments adopted on February 3, 2020 provided for registration lengths which conclude upon milestone attainment and directed Staff to produce monthly reports on the status of the State's progress toward closure. Monthly reports on SREC program closure were issued for January, February, and March.

In December 2019, the Board approved a Transition Incentive Program designed to provide a bridge between the legacy SREC program and a successor incentive program. The transition incentive was further amended by orders issued in January and February 2020 and the subject of proposed rules approved by the Board on March 27, 2020.

Also, at the March 27, 2020 agenda, the Board approved a waiver of the Board's SREC registration rules in light of the COVID-19 response to allow registrants an additional 90 days to submit post-construction certification documents following the state's attainment of the 5.1% milestone. The March report on the progress toward the 5.1% milestone projected closure as early as May 2020 as a result of consistently declining retail sales

figures since the summer of 2019. At the April 6 agenda meeting, the Board announced that the attainment of the 5.1% milestone was imminent given the additional decline in retail electricity sales anticipated with the COVID-19 response and directed Staff to close the SREC market to new entrants on April 30, 2020.

On May 1, 2020, the Solar Transition opened to new registrants and is also transitioning from the legacy SREC program in-progress solar projects that did not energize prior to the 5.1% milestone. The Transition Incentive Program will remain open to new registrants until the Successor Incentive Program, currently in development, is launched.

A Board consultant is in the process of finalizing a draft capstone report detailing suggestions for the Board to consider as the Successor Incentive Program is developed. Staff will release the draft capstone report for public comment and a series of stakeholder sessions in the summer of 2020. Following this period of stakeholder engagement, the consultant will finalize and submit the capstone report. Concurrently, Staff is developing a Staff straw proposal on the Successor Program, to be further informed by the capstone report and stakeholder feedback. Following release of the capstone report, Staff will launch a series of stakeholder engagement sessions on specific topics relevant to the Successor Solar Program, with the intent of submitting an order for Board consideration in the fall of 2020 to launch the Successor Solar Program.

Community Solar

On January 17, 2019, the Board approved the Community Solar Energy Pilot Program following substantial public input and launched it on February 19, 2019 upon the publication of rules in the New Jersey Register. The Pilot Program establishes a capacity limit of at least 75MW per year for three years, at least 40% of which must be allocated to projects serving low- and moderate-income participants. Pursuant to the CEA, the Pilot Program will be replaced within three years by a permanent Community Solar Program.

In addition to the Pilot Program rule, the Board approved and released the Program Year 1 Community Solar Energy Pilot Program application form on March 29, 2019. The Program Year 1 application period opened on April 9, 2019 and closed on September 9, 2019. The Board received 252 applications, representing over 650MW. On December 20, 2019, the Board granted conditional approval to 45 projects, representing almost 78MW. All 45 projects have committed to allocating at least 51% of project capacity to low- and moderate-income subscribers. In the summer of 2020, the Board will be conducting further stakeholder engagement to evaluate the Program Year 1 process before issuing the Program Year 2 application form in 2020.

Offshore Wind

Governor Phil Murphy signed E08 on January 31, 2018. The purpose of E08 was to reinvigorate the implementation of the State's OWEDA. E08 directed the BPU and all agencies with responsibility under OWEDA to "take all necessary action" to fully implement OWEDA and begin the process of moving New Jersey towards a goal of 3,500 megawatts of

offshore wind energy generation by the year 2030. E08 also required an initial solicitation of 1,100 MW as the first step towards achieving the goal, and required the development of an Offshore Wind Strategic Plan (OSWSP).

In 2018, the Interagency Agency Taskforce on Offshore Wind was developed to assist in the development of the OSWSP. In FY19, a consultant for the OSWSP was retained, and work began. In September 2018, the BPU issued a solicitation for 1,100 MW of offshore wind energy generation, and in June 2019, the BPU approved an application for a 1,100 MW offshore wind generation project submitted by Ocean Wind.

On November 19, 2019, Governor Murphy signed E092, increasing the State's offshore wind energy generation goal to 7,500 MW by 2035. Governor Murphy found that, as a result of efforts by the State following E08, "offshore wind development is a growing economic sector in the State with increases in supply chain presence, private investment in ports, workforce development efforts, and research and development for offshore wind industry and labor." Governor Murphy found that expanding the offshore wind goal will ensure that the State can "meet the State's goals of 50 percent renewable energy by 2030 and 100 percent clean energy by 2050, in addition to creating a significant number of good-paying jobs."

The OSWSP consultant's scope of work was revised to account for the increased goal, and additional modeling and analysis was completed. A draft OSWSP is scheduled for release to the public for comment in July 2020, and the final OSWSP is expected to be adopted by the BPU in Q3 2020.

On February 28, 2020, Governor Murphy announced the offshore wind solicitation schedule to meet the 7,500 MW goal by 2035. Governor Murphy called on the BPU to once again take all necessary actions to implement the schedule. In April 2020, a consultant was retained, and the BPU is currently developing the second solicitation for approximately 1,200 to 2,400 MW. A Draft Solicitation Guidance Document will be released for public comment in July 2020, and the release of the solicitation is expected in Q3 2020 after approval by the BPU. Applications are expected in Q4 2020, with awards considered by the BPU in Q2 2021.

In addition to the above, the Rutgers' Department of Marine and Coastal Sciences (DMCS) will continue assisting the BPU and the OSW industry with offshore wind modeling.

DISTRIBUTED ENERGY RESOURCES

In FY20, the first phase of the BPU's Town Center Distributed Energy Resources (TCDER) Microgrid Incentive Program was completed. Phase I consisted of TCDER Microgrid feasibility studies. The BPU funded 13 feasibility studies, which Staff reviewed and

accepted. Also in FY20, the BPU launched Phase II of the TC DER Incentive Program. Phase II consists of incentives for a detailed design of the TC DER Microgrid, with the approved feasibility study participants eligible for Phase II incentives (one feasibility study participant voluntarily withdrew from consideration, leaving 12 eligible applicants for Phase II incentives). Eleven applications were received in May 2020, and in FY21 the BPU will review applications and consider awards for detailed design.

STATE ENERGY OFFICE

The State Facilities Initiative (SFI) identifies and implements EE projects in the state at governmental and or quasi-governmental mandated agencies and facilities to implement energy reduction, energy savings, and EE projects with the objective of producing energy and cost savings. The Energy Capital Committee (ECC), consisting of members from the Department of Treasury, including the Office of management and Budget and the Division of Property Management and Construction (DPMC) Energy Initiatives Group, along with the BPU's State Energy Office (SEO), coordinates and recommends approval of these projects based on evaluation of capital costs and anticipated energy savings. The SFI funds are allocated for and spent on projects identified by the SEO and the ECC. Additionally, the Board and DPMC entered into a Memorandum of Understanding on November 13, 2020 for the purpose of setting roles and responsibilities of the parties and governing SFI funding allocation and spending.

The FY20 budget includes additional funding for State-sponsored projects in Trenton and other projects to be identified and prioritized through the review of FY20 budget requests from State agencies. Projects will include continuation of the Richard J. Hughes Justice Complex project, the Department of Environmental Protection Building project, as well as other: (a) improvements, upgrades, and replacements of air handling and movement systems, (b) lighting and equipment upgrades and replacements, (c) boiler, chiller and HVAC replacements, (d) lighting and building controls, (e) RE and EE systems at State facilities, and (f) injection of funding for current State facility projects outside of the ECC domain that have an EE or RE component but are stalled due to lack of funding.

OUTREACH AND EDUCATION

In FY20, outreach and education will play a key role in driving energy savings and educating all customer markets of the benefits and cost savings associated with energy reduction plans.

The Division of Clean Energy postponed the Clean Energy Conference, which was to have occurred on April 3-5, 2020, due to the health crisis. The conference will help educate the public about the benefits derived from NJCEP and the opportunities available through the program. The conference will deliver a platform that will inform industry, government, and

trade stakeholders about upcoming changes and enhancements to New Jersey's clean energy initiatives, increasing national recognition of New Jersey as a leader in clean energy.

The DCE looks forward to continuing to improve the visibility and exposure of NJCEP and to advance the State's clean energy goals through a variety of efforts, including outreach through its program administrator TRC, as well as strategic partnerships with academic and non-profit partners such as the New Jersey Institute of Technology and Sustainable Jersey.

EVALUATION

Evaluation and related research provide crucial insights into and analysis of clean energy markets and programs. The BPU is the lead agency tasked with the development and implementation of the EMP and NJCEP. As such, the BPU is required to track and report on progress in meeting the EMP goals, as well as to evaluate current and proposed NJCEP programs in terms of their achievement of energy savings, rate impact, and costs versus benefits of specific programs operated through ratepayer funds. The BPU is also required to establish baselines related to efficiency, RE generating sources, and emerging technologies and to evaluate the market potential for current and emerging clean energy technologies.

The CEA required the Board to establish an independent advisory group to study the evaluation, measurement, and verification process for EE and peak demand reduction programs. In FY20, Staff convened the Energy Efficiency Advisory Group, which played a key role in establishing the new EE framework.

Rutgers University's Center for Green Buildings will continue to support the BPU's DCE to manage program evaluation and the NJ Energy Data Center and to perform cost-benefit analyses and other related research activities.

The EE transition action required by the Board on June 10, 2020 required enhanced evaluation, measurement, and verification to ascertain both costs and savings, among other targets. Over the next quarter, DCE Staff will work to procure a statewide evaluator to assist in the independent evaluation of State and utility programs and to help lead the Evaluation, Measurement, and Verification Working Group as required by the Board on June 10, 2020.

FISCAL YEAR 2020

The funding recommendations for FY20 considered the program's historic results and proposed several changes to existing programs. The following table shows NJCEP program expenses, commitments, and energy savings/generation since FY19:

**NJ Clean Energy Program
Historical Results**

| Category | FY14 | FY15 | FY16 | FY17 | FY18 | FY19 |
|------------------------------|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|
| Expenses: | | | | | | |
| Energy Efficiency | \$ 178,097,682 | \$ 187,876,975 | \$ 158,597,561 | \$ 154,637,292 | \$ 141,866,785 | \$155,100,858 |
| DER | 1,474,906 | 2,448,358 | 4,958,392 | 21,116,544 | 5,611,076 | \$6,950,828 |
| Renewable Energy | 4,193,890 | 4,699,543 | 4,247,762 | 2,372,698 | 1,968,807 | \$2,617,286 |
| EDA Programs | 5,524,016 | 2,877,474 | 202,606 | 2,550,186 | 134,654 | \$98,749 |
| NJCEP Admin | 5,511,570 | 5,435,669 | 7,574,044 | 7,460,631 | 7,004,563 | \$8,732,720 |
| TRUE Grant | 7,419,100 | - | 3,000,000 | 3,291,331 | - | - |
| NJCEP Total Expenses | \$ 202,221,164 | \$ 203,338,018 | \$ 178,580,365 | \$ 191,428,681 | \$ 156,585,885 | \$173,500,440 |
| Year-end Commitments: | | | | | | |
| Energy Efficiency | \$ 95,187,314 | \$ 102,018,033 | \$ 83,573,517 | \$ 103,660,829 | \$ 116,223,497 | \$132,443,047 |
| DER | 6,050,795 | 9,361,807 | 31,490,510 | 25,075,756 | 19,732,356 | \$14,231,341 |

| Demand Reduction (kW) | 80,245 | 113,442 | 69,668 | 76,104 | 52,461 | 75,304 |
| Generation (MWh) | 5,346,105 | 4,853,617 | 7,800,616 | 9,338,166 | 8,564,608 | 8,240,121 |

SBC Collection Schedule

For FY20, the allocation of the funding to utilities is based on the statewide Universal Service Fund proceeding that forecasts electric and natural gas operating jurisdictional revenues and normalized monthly sales, which are provided below.

| NJ Utility Jurisdictional Operating Revenue and Volume | | | | | |
|---|------------------|----------------|---|------------------|----------------|

Staff utilized the revenue and sales projection from the tables above to develop the proposed monthly utility payments. The table on the next page sets out the proposed monthly payments to the Clean Energy Trust Fund due from each utility. This fund accounts for revenues collected from the SBC on monthly utility bills. Funds generated from this charge are used to support clean energy initiatives.

CONCLUSION

On May 23, 2018, Governor Murphy signed the CEA, which requires the State to achieve 100% clean energy by 2050. The FY20 5th quarter proposed NJCEP plan continues critical advancement of initiatives that will support these ambitious goals. Staff's straw proposal includes the continuation and enhancement of programs that maximize EE and ensure equitable access to affordable EE opportunities for all citizens in the state.

Staff's straw proposal for the 5th quarter FY20 CRA emphasizes the benefits of EE as a foundational energy resource while providing additional benefits, including the health benefits associated with improved air quality, lower environmental compliance costs, increased grid reliability, and economic development opportunities in the form of jobs in construction and a more competitive business environment.
